01 Introduction

Deshmukh Technologies is envisioned as a technology and software development organization focused on building modern digital solutions, business applications, automation systems, web platforms, mobile applications, and technology-driven products.

The company's approach is centered on combining strong engineering, practical problem solving, modern technologies, and business understanding to create reliable and scalable solutions for organizations, businesses, institutions, and communities.

Our goal is not simply to develop software. Our goal is to use technology to solve real problems, improve processes, create opportunities, and build solutions that deliver measurable value.

This profile describes intended identity, operating philosophy, technology focus, people system, and long-term direction. It does not make claims about current headcount, clients, revenue, or market position.

02 Who we serve

Deshmukh Technologies is designed to create value for organizations, institutions, internal operations, and fresh talent that needs a structured path into professional engineering.

WHO

- Organizations that need reliable business applications
- Teams digitizing paper or spreadsheet processes
- Institutions that need web or mobile access
- Operations that can be improved through automation
- Entry-level engineers on the DTTP path

TYPICAL PROBLEMS

- Manual work that should be a system
- Scattered data that should be one source of truth
- Slow approvals that should be a workflow
- Local tools that should become a web platform
- One-off scripts that should become maintainable software

03 How we work

UNDERSTAND

DEFINE

DESIGN

DEVELOP

TEST

REVIEW

DEPLOY

IMPROVE

We prefer working software over unused complexity. A layered system that a team can explain is better than a distributed system nobody can operate.

04 How we document

Work that cannot be explained cannot be handed over. Writing is part of engineering, not decoration after delivery.

We write	So that
Requirements and “done”	The team shares one outcome
Design and data notes	The next person can change the system
API contracts	Frontend and backend do not guess
Reviews and daily notes	Feedback is specific and repeatable
Runbooks	Someone else can start, test, and recover the system

WRITING RULES FOR COMPANY DOCUMENTS

- State facts. Do not invent headcount, clients, revenue, or market position.
- Name the user and the problem before naming the technology.
- Prefer a short table or a worked example over a slogan.
- Keep the three official documents consistent: profile for identity, handbook for the 90 days, self-growth for the knowledge map.

05 Our Vision

To build a technology organization that develops innovative, reliable, scalable, and accessible digital solutions while creating a strong culture of engineering excellence and continuous learning.

06 Our Mission

- Develop high-quality software solutions
- Digitize traditional business processes
- Build scalable web and mobile applications
- Automate repetitive business operations
- Help organizations use technology effectively
- Develop modern cloud-based solutions
- Encourage innovation and problem solving
- Build and nurture skilled technology professionals
- Create practical opportunities for fresh talent

Mission	What it looks like
High-quality software	Clear requirements, reviews, tests, and documentation
Digitize processes	Replace informal workflows with tracked systems
Cloud solutions	Deploy, observe, and recover systems deliberately
Talent development	DTTP, mentorship, and promotion by demonstrated capability

07 Technology Focus

Deshmukh Technologies can operate across a modern technology ecosystem.

FULL-STACK DEVELOPMENT

React + TypeScript is the standard frontend path. Java / Spring Boot or Python / FastAPI is the backend specialization. MySQL / PostgreSQL is the default system of record. GitHub + Docker + CI/CD + AWS is the delivery path. AI and automation are introduced where they improve a real process, not as decoration.

08 Development Philosophy

Deshmukh Technologies follows a practical engineering approach:

We believe good software should be:

A feature is not finished when the screen appears. It is finished when the requirement is understood, the data is correct, validation and permissions are in place, tests cover the important cases, the change is reviewed, and the change can be deployed and supported.

09 Our People

Technology is built by people. Deshmukh Technologies therefore focuses on developing a culture where team members are encouraged to:

Learn continuously Ask questions Solve problems Share knowledge Take ownership Review each other's work

Learn from mistakes Improve continuously

This philosophy directly supports the company's **DTTP — Deshmukh Technologies Trainee Program**, which is designed to develop freshers and entry-level candidates into capable software professionals.

10 Deshmukh Technologies Trainee Program

The **DTTP** is a structured 90-day Full-Stack Software Development and Professional Development Program. The program takes a trainee through:

01 Orientation	02 Programming	03 Frontend
04 Backend	05 Database	06 REST APIs
07 Authentication	08 Testing	09 Debugging
10 Docker	11 CI/CD	12 AWS
13 Real Project	14 Production Readiness	

Backend specialization is **Java + Spring Boot** or **Python + FastAPI**, with **React + TypeScript** as the common frontend path. DTTP is not a side activity. It is the company's method for building engineers who can later own products and client work.

11 Our Commitment to Trainees

Deshmukh Technologies aims to provide trainees with more than theoretical education.

Structured learning Practical assignments Mentor guidance Code reviews Real project exposure Git / GitHub

Testing Debugging Deployment Continuous feedback Measurable skill development

Student → Trainee → Developer → Project Contributor → Production-Ready Engineer

12 Our Core Values

1. Integrity

Do the right thing, even when nobody is watching.

2. Learning

Technology changes continuously. We must continue learning.

3. Ownership

Take responsibility for the work you accept.

4. Quality

Build software that can be trusted.

5. Innovation

Look for better ways to solve problems.

6. Teamwork

Great products are built by teams.

7. Customer Value

Technology must ultimately create meaningful value for users and organizations.

8. Continuous Improvement

Every product, process, and individual can become better.

Value	Daily behavior
Integrity	Do not hide a broken test, a missed requirement, or a leaked secret
Ownership	Stay with a task until it meets the Definition of Done
Quality	Prefer a smaller correct change over a large fragile one
Customer value	Ask who the user is and what becomes easier for them

13 Our Development Culture

We don't encourage developers to simply write more code. We encourage them to understand problems better and write the right code.

A developer should be able to explain:

01

What problem are we solving?

02

Why are we solving it this way?

03

What are the alternatives?

04

What could fail?

05

How have we tested it?

06

How will we maintain it?

14 Our Long-Term Direction

Deshmukh Technologies can grow toward becoming a technology organization with capabilities across:

SOFTWARE PRODUCTS

CUSTOM SOFTWARE

ENTERPRISE SOLUTIONS

MOBILE APPLICATIONS

WEB PLATFORMS

CLOUD & DEVOPS

AI & AUTOMATION

TECHNOLOGY TRAINING

The long-term objective is to create an organization where **product development, engineering talent, innovation, and technology education reinforce one another.**

Document	Use	Audience
Corporate Master Profile	Who we are and how we work	Leadership, clients, new joiners
DTTP 90-Day Handbook	How trainees are trained, assessed, and graduated	Mentors and trainees during the 90 days
DTTP Self-Growth Program	How engineers keep growing around the 90 days	Self-study before, during, and after DTTP
